

Technical Memorandum

Date: 8 August 2014 From: Stephen Ochs (AMEC)

To: Panoche Valley Solar LLC

Cc: Chris Steves
James Rustin

Subject: **CalEEMod Analysis of Potential Particulate Emissions From Construction Activities at the Panoche Valley Solar Farm Project**

This memorandum summarizes the particulate emission modeling for earthmoving construction activities associated with the Panoche Valley Solar Farm Project in San Benito County, California. The California Emission Estimation Model (CalEEMod) version 2013.2.2 was used to estimate the maximum daily particulate matter less than 10 microns (PM-10) emissions associated with earth moving activities at the construction site. CalEEMod is a statewide land use emissions model developed in collaboration with the California Air Districts and approved for use with CEQA, NEPA, and other programs. CalEEMod was released on July 31, 2013, and most air quality districts no longer support the use of the Urbemis model in CEQA studies. CalEEMod has several advantages over Urbemis including the inclusion of CARB's EMFAC2011 emission factors, updated methods for calculating fugitive dust from grading and site preparation, and model defaults based on air district location.

Project Information

A list of the proposed construction equipment was supplied and is listed in Table 1. Since specific equipment models are subject to availability at the time of the project start, CalEEMod defaults for engine size and engine loading were used for this analysis.

Table 1: Default Equipment List

Equipment Type	Quantity
Scrapers	7
Bulldozer	2
Hydraulic Excavator	2
Wheel Loader	1
Backhoe	1
Gannon Tractor	1
Grader	4
Off road dump trucks	10
Roller	2
Water truck	5
Water Pull	4

The following additional information was provided and applied to the analysis:

- All equipment engines will be Tier 2 rated or better for the project.
- Fugitive dust controls will include watering all disturbed areas at least three times per day.
- Up to 15,000 cubic yards of material is expected to be imported to the site. The maximum expected daily amount of imported material will be 1,200 tons with up to 35 haul trips per day to deliver the material.

San Benito County was selected as the site location in CalEEMod. Based on the CEC Forecast Climate Zones figure in the CalEEMod Users Guide, zone 4 was used in the model.

Site grading will be phased with an anticipated maximum disturbed area of 50 acres per day. In order to provide flexibility in the construction, CalEEMod was set up to run a single construction day to determine the maximum allowable amount of acreage that can be disturbed per day without exceeding the 82 pound per day significance threshold. For comparison a run with the maximum anticipated disturbed area of 50 acres with material import is provided in the summary of the model runs (Table 2).

Table 2: CalEEMod Results

Fill Amount per Day	Area Disturbed (acres per day)	Daily PM-10 emissions	Daily PM-10 emissions onsite only	Significance Threshold (lbs/day)
0	175	81.8 lbs	80.6 lbs	82
1,200 tons with 35 haul trips	165	80.4 lbs	76.5 lbs	82
1,200 tons with 35 haul trips	50	31.0 lbs	28.9 lbs	82

The maximum daily PM-10 emissions from on-site construction emissions which are not expected to have a significant impact on local air quality are 82 pounds per day (APCD, 2008). The three scenarios listed in Table 2 above meet the agency emission limit.

CalEEMod output files for the three scenarios are provided in the Attachment.
