

San Benito County Emergency Medical Services Agency

ISOLATED LIMB INJURIES (INCLUDING HIP)

Protocol: T2
Effective: July 1, 2015
Reviewed: May 1, 2015

- I. BLS Treatment Protocol:
 - A. Treat life threats. (See Policy 4000 *Life Threats*).
 - B. Control bleeding.
 - C. Spinal precautions as indicated.
 - D. Splint as appropriate. Traction splints are indicated for midshaft femur fractures.
 - E. Manage amputated part. Place in a water tight plastic bag and keep cool. Do not allow ice to come in direct contact with the amputated part. Freezing will destroy tissue.
 - F. Prepare for transport / transfer of care.
- II. ALS Treatment Protocol
 - A. Treat life threats. (See Policy 4000 *Life Threats*)
 - B. For pain control refer to pain management policy (Policy 5600 *Pain Management*)
 - C. Transport.
 - D. Contact Base Station as indicated.

Note:

* Hold Morphine Sulfate if patient has or develops respiratory depression, bradycardia or hypotension. Narcan should be immediately available to reverse adverse effects. Contact the Base Station for additional morphine sulfate.
